**OFFICE MEMORANDUM**

**Subject: Nodal LSA for Inspection of ISP Licensees-reg.**

Kindly refer to letter No. S-16/20/2022-DS-III dated 25.08.2022 from DS cell on reduction in compliance burden of ISPs. For the inspection of ISPs having network elements which are catering to more than one LSA, the inspection mechanism will be as follows:

1. The LSA in which the registered address of the Licensee is located will be the nodal LSA for the inspection.
2. The LSA in which a network element of the Licensee is located will conduct the inspection of that element and submit its report to the nodal LSA. Other LSAs to which the network element is catering to may join the inspection physically/via video conferencing. Nodal LSA may seek inputs/reports from any other LSA if required for the inspection of the Licensee. Nodal LSA will compile the inputs from the LSAs and prepare the final inspection report.

This issues with the approval of competent authority.
